

**Amendments to the Claims:** This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Currently Amended) In a recording and reproducing device having a program list recording part to record program information, comprising:

(a) control input means to input a password;

(b) password managing part to manage said password; and,

(c) program list forming means to read from said program list recording part and to form a program list;

wherein:

said program list recording part includes a first program list recording part whose information is stored responsive to input of a valid password from the control input means which matches the password managed in said password managing part and a second program list recording part whose information is stored responsive to the control input means when a user does not input said valid password,

the control input means determines whether the program information is to be stored in a first program list recording part or a second program list recording part, and

the program list forming means are provided one of a plurality of indication modes, the plurality of indication modes including: (1) a first indication mode in which said program list is read from one of: (i) the first program list recording part; or (ii) the first program list recording part and the second program list recording part to form the program list and (2) a second indication mode in which said program list is read from the second program list recording part to form the program list.

2. (Canceled)

3. (Currently Amended) The recording and reproducing device of claim 1, wherein ~~said one of the plurality of either of said two~~ indication modes ~~are~~ is selected by the control input means.

4-7. (Cancelled)

8. (Currently Amended) The recording and reproducing device of claim 1, wherein said program list includes a reservation list indicating program information ~~setting to set~~ a reservation and recorded program list indicating recorded program information.

9. (Currently Amended) The recording and reproducing device of claim 1, wherein choosing a program in said program list read from program list recording part enables contents of ~~said a~~ desired program to be reproduced or deleted from the recording medium.

10. (Currently Amended) The recording and reproducing device of claim 1, said device further comprising:

a V-chip signal detecting part to detect a V-chip signal in television broadcasting, wherein said V-chip signal detected in said V-chip detecting part controls television broadcasting program information to be recorded in the first program list recording part or the second program list recording part.

11. (Currently Amended) The recording and reproducing device of claim 10, wherein a rating level of V-chip system is determined by said control input means.

12. (Currently Amended) The recording and reproducing device of claim 10, wherein

the program information is recorded in the first program list recording part when the V-chip signal of the desired program is detected to be stricter than said predetermined rating level.

13. (Previously Presented) The recording and reproducing device of claim 10, wherein television broadcasting program information is recorded in the first program list recording part when a viewing restriction in said V-chip signal is detected in said V-chip signal detecting part.

14. (Currently Amended) A method of forming a program list of a recording and reproducing device having plural program list recording parts to record program information of television broadcasting contents, and having said program list including a reservation list to record reservation program information and a recorded list to record recorded program information, comprising the step of:

(a) ~~inputting a password; determining whether a password is inputted and~~  
valid;

(b) storing the program information: (1) in a first program list recording part, when the password is both inputted and valid and (2) in a second program list recording part when the password is either not inputted or not valid~~comparing said inputted password with password managed in password managing part of recording and reproducing device; and,~~

(c) forming and displaying the program list from one of: (1) said plural~~first~~  
program list recording part, (2) said second program list recording part; or (3) said  
first and second program list recording parts only when said inputted password  
matches in password managing part.

15-21. (Canceled)

22. (Currently Amended) A recording and reproducing apparatus, comprising:

a first ~~memory location-recording area~~ where program information is at least one of stored and accessed when a valid password is entered, and

a second ~~memory location-recording area~~ where said program information is at least one of stored and accessed when said valid password is not entered.

23. (Previously Presented) A recording and reproducing apparatus according to claim 22, further comprising a V-chip for evaluating said program information and for storing said program information in said first memory if said program information is in a restricted category identified by said V-chip.

24. (Currently Amended) A recording and reproducing apparatus, comprising:

a first ~~memory-recording part~~ having a plurality of locations where program information is stored when respective valid passwords are entered; and

a second ~~memory-recording part~~ where program information is stored recorded when said valid passwords are not entered.

25. (Currently Amended) A recording and reproducing device having a program list recording part to record program information, wherein the program information is determined to be recorded in a first recording part or to be recorded in a second recording part by control input means, comprising:

(a) the control input means to input a password;

(b) a password managing part to manage said password; and

(c) program list forming means to read from said program list recording part and to form a program list;

wherein said program list recording part includes a first program list recording part whose information is indicated responsive to input of a valid password which matches the password managed in said password managing part

and a second program list recording part whose information is indicated when a user does not input said valid password.

26. (Currently Amended) A recording and reproducing device having plural program list recording parts to record program information of television broadcasting contents, wherein the program information is determined to be recorded in a first recording part or to be recorded in a second recording part by control input means comprising:

- (a) a password managing part to manage passwords;
- (b) ~~a~~ said control input means to input said passwords;
- (c) a recording medium dividing part for dividing a recording medium into a plurality of divided recording areas,
- (d) a program list forming part to read from said program list recording parts based on said divided record areas and to form a plurality of program lists,

wherein program information is read from at least one of said program list recording parts based on said divided record areas, and one of said program lists ~~are~~is formed when an inputted one of said passwords by said control input means matches one of said passwords which ~~corresponds~~corresponds to one of said record areas managed in said password managing part,

and wherein one of said divided record areas of said recording medium comprises two kinds of program list recording parts; said two kinds of program list recording parts including one recording part whose information is indicated responsive to input of a valid password which matches one of the passwords that correspond to one of the record areas and is managed in said password managing part, and another recording part whose information is indicated when a user does not input said valid password.
